

Side Mount M1

Flexible mounting of sensors on vehicles

Description

The side mount M1 can be quickly and easily attached to any sheet steel surface using magnets.

Due to its 3 beared support points, the mount also finds a secure hold on curved surfaces and thus ensures stable installation.

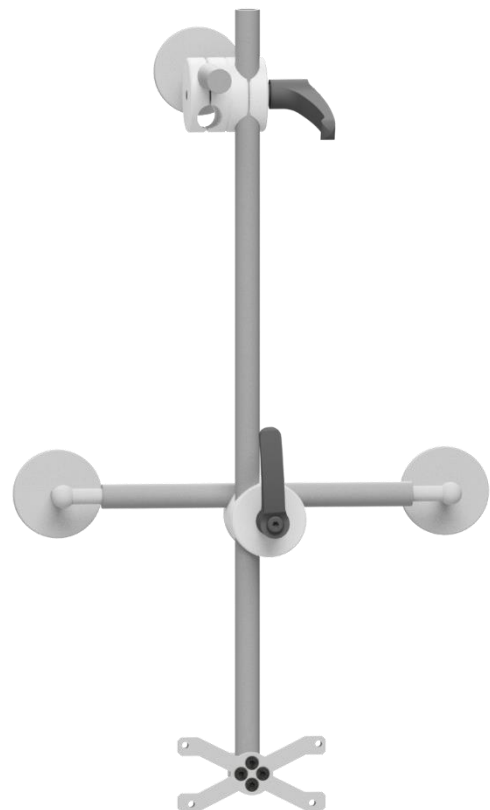

Its double clamps enable variable adjustment along the support tubes as well as a multi-dimensional adjustment range.

This enables secure installation on complex vehicle surfaces.

No additional tools are required to install the mount.

The magnets have a rubberized surface. This avoids scratches and damage to the vehicle paintwork.

Expandable and combinable with additional clamps, tubes, magnets and suction cups.

Features

- Easy mounting
- Large adjustment range
- Adjustable without tools
- Suitable for curved surfaces
- Small pack size for transport
- Many degrees of freedom possible
- Easy to expand
- Low weight
