

Towing Lug Mount T1

Flexible mounting of sensors on vehicles

Description

The towing lug mount T1 enables easy and extremely stable mounting on the towing lug of vehicles.

Due to its variable clamp, it can be installed on a wide variety of vehicle types. A centering pin makes assembly easier and prevents twisting.

The double clamp allows variable adjustment along the towing lug mount. In addition, the double clamp is rotatably mounted and thus opens a multi-dimensional adjustment range.

As a result, misalignments of the towing lug and the distance to the road can be corrected.

The sensor can be ideally aligned on the vehicle without additional tools.

Expandable and combinable with additional clamps, tubes, suction cups and magnets.

Features

- Easy mounting
- Large
- Suitable for car towing lug
- Compact size
- Small pack size for transport
- Many degrees of freedom possible
- Easy to expand
- Low weight
